

## DATA SET 1: Brain Tumor MRI Dataset

- Type of imaging data: MRI
- Number of images: 1311 images
- Classes/Labels:
  1. Glioma
  2. Meningioma
  3. No tumor
  4. pituitary
- Dataset imbalance: Tumor classes have more images compared to “no tumor” class
- Challenges observed:
  1. Some images have noise
  2. Tumors differ in size and shape

### **BRIEF SUMMARY:**

This dataset contains MRI Scans of the brain for tumor classification. Variations in contrast, size, and tumor appearance make the classification more difficult. Class imbalance may affect model performance.

## DATA SET 2: COVID-19 Chest X-ray Dataset

Normal

Mildly Abnormal

Moderately Abnormal

Severely Abnormal

COVID-19

COVID-19

COVID-19

COVID-19

- Type of image data: Chest X-Ray
- Number of images: 6432
- Classes/Labels:
  1. Covid 19
  2. Normal
  3. Viral pneumonia
- Dataset imbalance:
  1. Normal class has more images than COVID19
- Challenges observed:
  1. Overlapping visual patterns between pneumonia and COVID 19.
  2. They have different image resolutions.
  3. Some images are noisy.

**BRIEF SUMMARY:**

This dataset is used for detecting COVID 19 for chest X rays.
